AIR QUALITY

Methodology

Earth Systems 2018

Ambient concentrations of sulphur dioxide (SO₂), nitrogen dioxide (NO₂), carbon monoxide (CO) and ozone (O₃) were measured at three sites along the eastern part of KJE Phase 1 alignment. Gas concentrations were measured continuously for 30 minutes three times per day (morning, afternoon and evening), using Aeroqual Series 500 – Portable Air Quality Monitors. Similarly, particulate matter (PM_{2.5}, PM₁₀) was measured using a Particles Plus 8306 Handheld Particle Counter at two-minute intervals for one hour three times per day (morning, afternoon and evening).

US Embassy 2018

Hourly PM_{2.5} data is measured at the US Embassy in Kampala, which is located approximately 3 km from the Phase 1 section of the Mainline Expressway. Data for the period between February 2017-January 2018 was included in the ESIA.

Atacama 2017

Day time air quality data (10 AM to 6 PM) was collected at seven sites along Phase 1 of the KJE right of way using a MultiRAE Lite air quality meter. The device measured ambient concentrations of SO₂, NO₂ and CO at two-minute intervals.

Schwander et al 2014 & Kirenga et al 2015

The methodology followed by Schwander et al was as follows: Spot measurements in Mpererwe District, Kawempe South Division, and at Kalerwe Market, Kampala City were taken employing a Sioutas Personal Cascade Sampler. We collected fine particles (PM_{2.5}) and coarse particles (PM_{7-2.5}) for two 24-hour sampling periods (6:30 p.m. to 6:30 p.m.) between December 31st, 2012 and January 1st, 2013, and between January 2nd, 2013 and January 3rd, 2013. PM were collected on Teflon-membrane filters (37 mm, 2mm pore, Pallflex Gelman Scientific, Ann Arbor, MI, USA). The personal PM monitor as well as a Leland Legacy Pump were installed 3 meters above ground level, on the outside wall of a single-story structure under a 50 cm protruding metal sheet roof.

The methodology employed by Kirenga et al was as follows: PM_{2.5} concentrations were measured over periods of 24 hours from 30 June to 27 July 2014 with a real-time aerosol monitor, DUSTTRACK II-8530 at 18 sites (15 in Kampala and 3 in Jinja) that can assess PM_{2.5} concentrations in a range from 1 µg/m³ to 400 mg/m³. Concentrations of NO₂ and SO₂ were measured with Combo diffusion tubes (NO₂ and SO₂) at 28 study sites (22 in Kampala and 6 in Jinja).

JICA / UNRA 2013

JICA carried out air quality measurements at five sites around the start of the KJE Phase 1 alignment. A Testo 350 air measurement device was used to record sulphur dioxide and oxides of nitrogen. Due to the battery limitations of the equipment, three consecutive one-hour measurements were taken during the day time (6:00 -22:00) and

at night time (22:00 – 6:00) per site. Particulate matter was measured using the Suspended Particulate Matter (SPM) sampling method where particles are filtered from a known volume of air by a suction apparatus then weighed.
